NOVOCON FE1050 STEEL FIBRES
Novocon FE1050 steel fibres are designed specifically for the reinforcement of concrete, mortars and other cementitious mixes. Novocon FE1050 is a cold drawn wire fibre, deformed with flat ends (FE) to provide optimum performance within the concrete mix. Novocon FE1050 steel fibres are European Standard-EN 14889-1:2006 compliant and have been specifically designed to meet or exceed the defined performance requirements.

FEATURES & BENEFITS
• Provides uniform multi-directional concrete reinforcement
• Increases crack resistance, ductility, energy absorption or toughness of concrete
• Improves impact resistance, fatigue endurance and shear strength of concrete
• High tensile strength fibre bridging joints and cracks to provide tighter aggregate interlock resulting in increased load-carrying capacity
• Provides increased ultimate load-bearing capacity which allows possible reduction of concrete section
• Requires less labour to incorporate into concrete than conventional reinforcement
• Offers economical concrete reinforcement solutions with greater project scheduling accuracy
• Ideally suited for hand or vibratory screeds, laser screeds and all conventional finishing equipment

PRIMARY APPLICATIONS
• Ground supported slabs
• Suspended Floors
• Jointless Floors
• External roads & pavements
• Precast
• Overlays
• Walls
• Blast-resistant concrete

COMPLIANCE
• Complies with European Standard EN 14889-1:2006 Fibres for Concrete Part 1:Group I and carries CE marking
• Conforms to ASTM A820 /A 820M - 04, Type 1 cold drawn segment wire

PRODUCT USE

WE ARE THE CONCRETE FIBRE EXPERTS
WWW.FIBERMESH.COM
**MIXING**: Novocon FE1050 steel fibres can be added during or after the batching of the concrete but should never be added as the first component. Such devices as conveyor belts, chutes and dispensers may be used to add fibres to the mixer at the ready mix plant. After the fibres have been added, the concrete should be mixed for sufficient time (minimum 5 minutes at full mixing speed) to ensure uniform distribution of the fibres throughout the concrete mix. The use of mid or high-range water reducing admixtures can be advantageous, but is not essential.

**PACKAGING**: Novocon FE1050 fibres are available as standard in 25 kg bulk bags. The pallets should be protected against rain and snow. Do NOT stack pallets on top of each other.

**SAFETY**: It is recommended that gloves and eye protection be used when handling or adding Novocon FE1050 steel fibres to concrete. Full Safety Data Sheets are available on request.

**TECHNICAL SERVICES**: Fibermesh is backed by our team of concrete reinforcement specialists who can carefully analyze each project and provide fibre reinforced concrete design solutions to ensure maximum project performance and cost efficiency.

**SPECIFICATION CLAUSE**

Fibres for concrete shall be Novocon FE1050 flat end steel fibres conforming to EN 14889-1:2006 Group I and manufactured from cold drawn wire with a tensile strength of 1150 N/mm².

Unless otherwise stated, Novocon FE1050 steel fibres shall be added to the concrete at the recommended application rate of ... ... kg per cubic metre and mixed for sufficient time (minimum 5 minutes at full mixing speed) to ensure uniform distribution of the fibres throughout the concrete.

Fibrous concrete reinforcement shall be manufactured by:
